

UNIVERSITEIT VAN AMSTERDAM

## The Quantum Delta Netherlands initiative

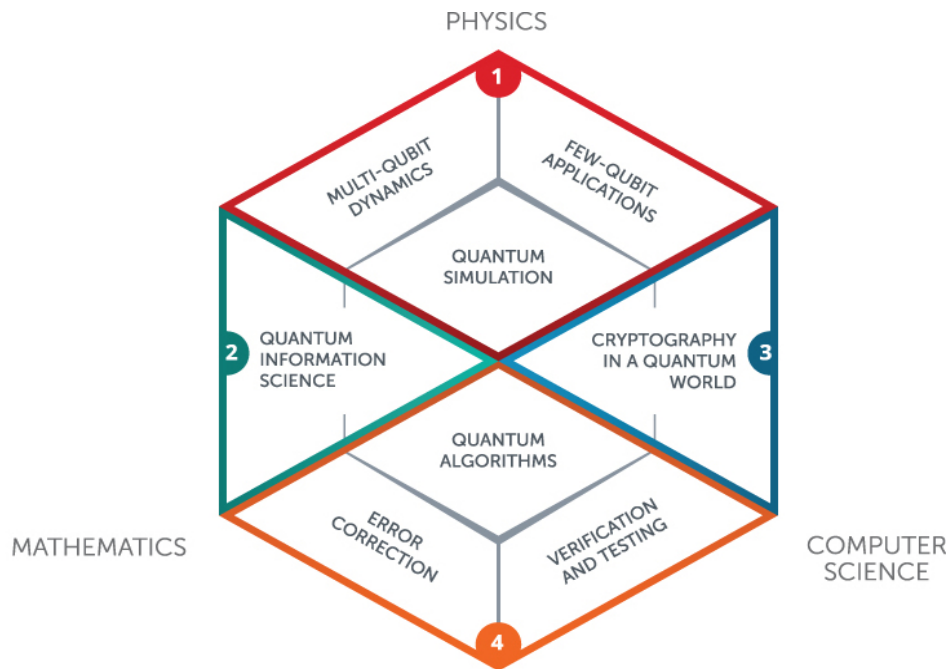

Kareljan Schoutens

QuSoft & Institute for Theoretical Physics

University of Amsterdam

*“Enabling the power of quantum computers”*

- Research center of UvA and CWI, founded Dec 2015, now grown to 75 fte
- Computer Science, Physics and Math
- Engagement with business & society via the innovation hub Quantum.Amsterdam

A celebration of 5 years  
excellent, fundamental  
and multidisciplinary  
quantum research  
For the full program and to register  
go to [www.qusoft.org/lustrum](http://www.qusoft.org/lustrum)

ONE-MONTH  
LUSTRUM EVENT

Keynote speakers are Gilles Brassard, Ignacio Cirac, Dorit Aharonov, Freeke Heijman and more

QuSoft's lustrum covers the first three weeks of December, with Opening day on December 3, Science Week from December 7 to 11, and Business & Society Day on December 17. Save the dates!.

The event is completely online and hosted by Crowdale  
The organization is very grateful to CWI and UvA for their financial support

# 2008: When Eytan met Kareljan ...

## Non-Abelian Anyons: When Ising Meets Fibonacci

E. Grosfeld<sup>1</sup> and K. Schoutens<sup>2</sup>

<sup>1</sup>*Department of Physics, University of Illinois, 1110 West Green Street, Urbana Illinois 61801-3080, USA*

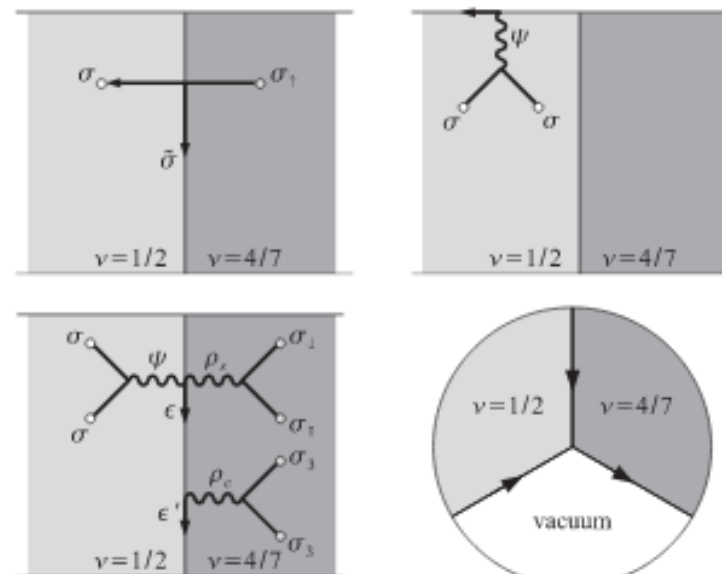

<sup>2</sup>*Institute for Theoretical Physics, Valckenierstraat 65, 1018 XE Amsterdam, The Netherlands*

(Received 20 October 2008; published 13 August 2009)

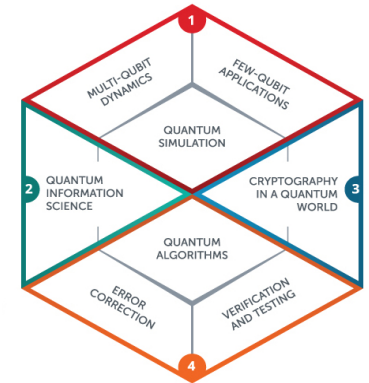

We consider an interface between two non-Abelian quantum Hall states: the Moore-Read state, supporting Ising anyons, and the  $k = 2$  non-Abelian spin-singlet state, supporting Fibonacci anyons. It is shown that the interface supports neutral excitations described by a  $(1 + 1)$ -dimensional conformal field theory with a central charge  $c = 7/10$ . We discuss effects of the mismatch of the quantum statistical properties of the quasiholes between the two sides, as reflected by the interface theory.

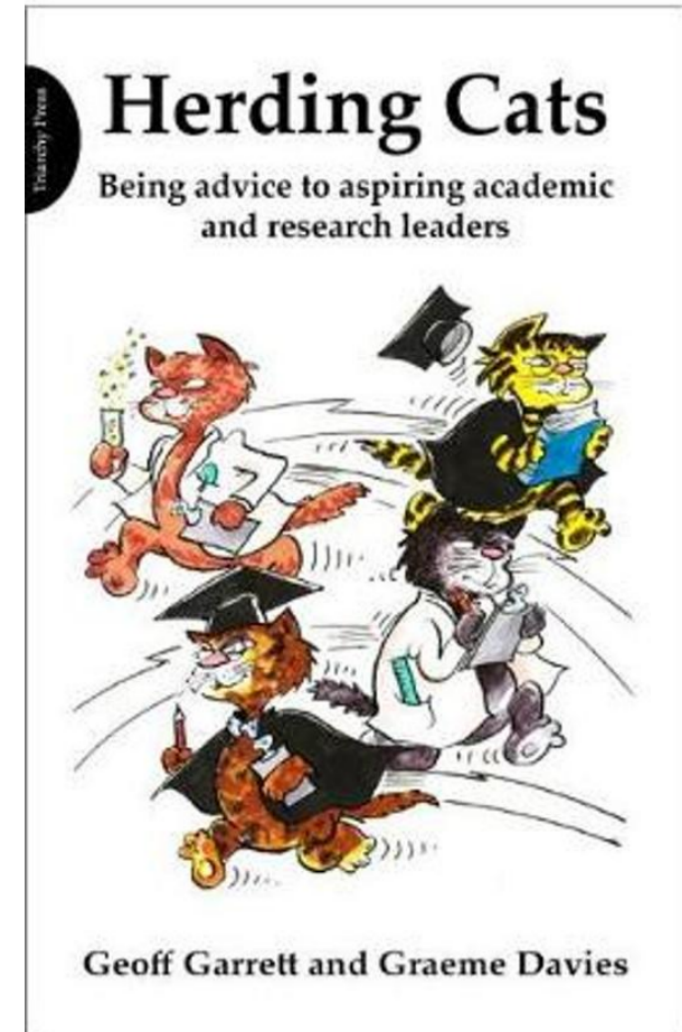

**Figure A1.** The circuit for the  $C^2 R_z(-\pi)$  operation derived using the method presented in this paper. Note that adjacent  $R_z(\phi_j)$  operations have been merged, leading to a more compact form than equation (3). Generalization to larger a larger number of qubits  $N$  is straightforward using the numbers in table A1.

# Organizing quantum science & technology in the Netherlands

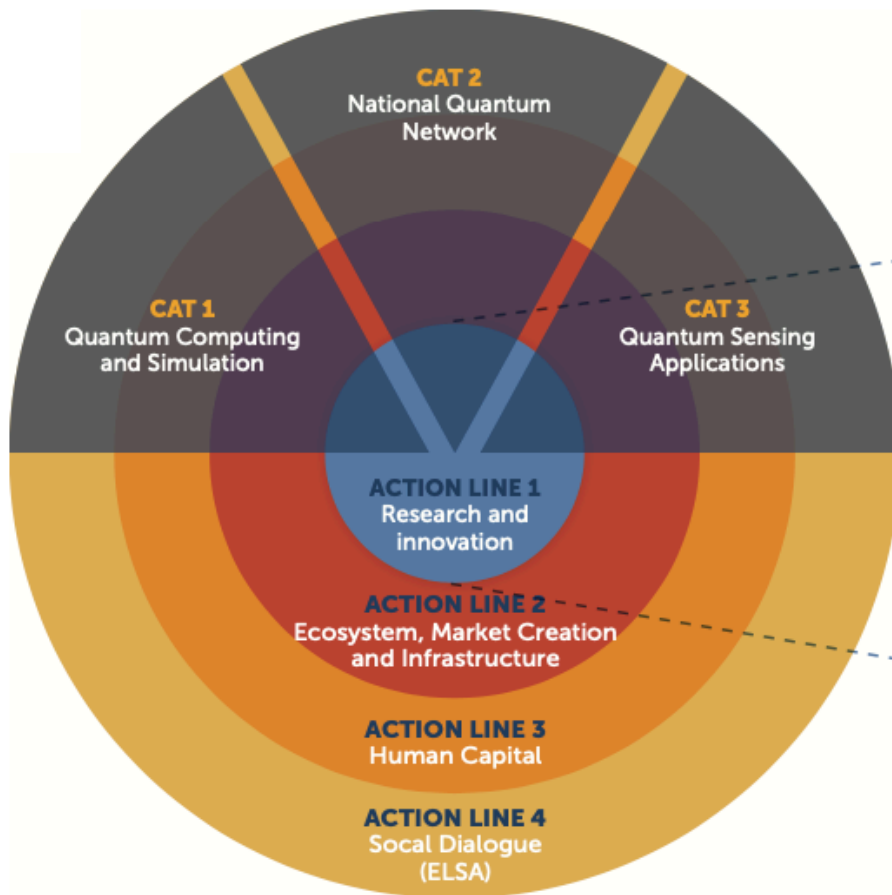

# Organizing science & technology

- **2019** – national quantum coalition presents National Agenda Quantum Technology (NAQT) to Dutch government

NATIONAL  
AGENDA FOR  
**QUANTUM  
TECHNOLOGY**

- **2020** – ministry of Economic Affairs & Climate gave initial grant (23.5 M€) to start implementing the NAQT
- outstanding request to NI government for funding the full NAQT
- quantum coalition now organized via foundation Quantumdelta Netherlands  
[www.quantumdelta.nl](http://www.quantumdelta.nl)

# Taking a leap into the **future**

The Netherlands is ready for the quantum decade

A STRONG NATIONAL ECOSYSTEM

## What is Quantum Delta?

The Netherlands is a vibrant international hotspot for quantum technology, with leading science, technology and talent. With Quantum Delta, we are creating a fully functional national **ecosystem for excellence** in quantum innovation, for highly talented professionals to bring quantum computers, quantum networks and quantum sensors to the market.

- Forging strong bonds between our **five major quantum research hubs** and affiliated universities and research centres
- Accelerating developments in network creation, in simulation and in applications in **three catalyst (CAT) programmes**
- **Strengthening large-scale facilities** across the country in five locations for nanotechnological research in a National Cleanroom Infrastructure programme
- Kicking off **four action programmes** to facilitate research and cooperation and to boost social readiness levels

LET'S INTRODUCE

## Our hubs

Despite being a small country, the Netherlands is well endowed with expertise and facilities in the field of quantum technology. The backbone of the nation's unique knowledge and innovation landscape is formed by **five specialist innovation hubs**. Each hub contains of research institutes, university, companies and start-ups/scale-ups and with a different focus. All these parties have a strong focus on collaborative research and innovation, not only with one another, but also with national and international enterprises.

- **Delft:** quantum computing, internet & network, with QuTech, Kavli Institute, Microsoft, Intel and others
- **Amsterdam:** applied quantum algorithms, quantum sensing & simulation, with QuSoft, CWI, UvA, VU, SURFsara and others
- **Leiden:** applied quantum algorithms, with aQa, Google, Shell, Volkswagen, Total and others
- **Eindhoven:** post-quantum crypto, quantum simulation & materials, with ASML, ThermoFisher, NanoLabNL and others
- **Twente:** quantum electronics and quantum photonics, with MESA+, Lockheed Martin, QuiX, Imec and others

# Economic impact of Quantum in The Netherlands

FINAL VERSION

18 May 2020, update 28 July 2020

## **A** Quantum has the potential to enable new capabilities across industries

**Quantum computing (QC)** could enable completely new territories of computing and allow for next generation of exponential performance improvement for some applications, after slow-down of Moore's law as we approach atomic size features

**Quantum communications (QComms)** could ensure security of communications even in the face of unlimited (quantum) computing power

**Quantum sensing (QS)** could provide measurements of various quantities (e.g., gravity, time, electromagnetism) that are orders of magnitude more sensitive than classical sensors

Potentially impacting many different industries
