

PIC APPLICATIONS IN DATACENTER NETWORKS

Elad Mentovich, NL-IL Mini-Symposium on Photonics, 22 April 2021

NVIDIA AT A GLANCE

Accelerated Computing Pioneer

Brief History

1993: Founded by Jensen Huang, Chris Malachowsky, and Curtis Priem
 1999: IPO on NASDAQ at \$12 (prior to 4 stock splits, now 12:1)
 2001: Xbox win; fastest semiconductor company to reach \$1B in sales
 2006: Unveils CUDA architecture, expanding to scientific computing
 2009: Inaugural GPU Technology Conference (GTC)
 2016: Introduces first products for AI and autonomous driving
 2020: NVIDIA acquires Mellanox to become a leader in Data Center Networking

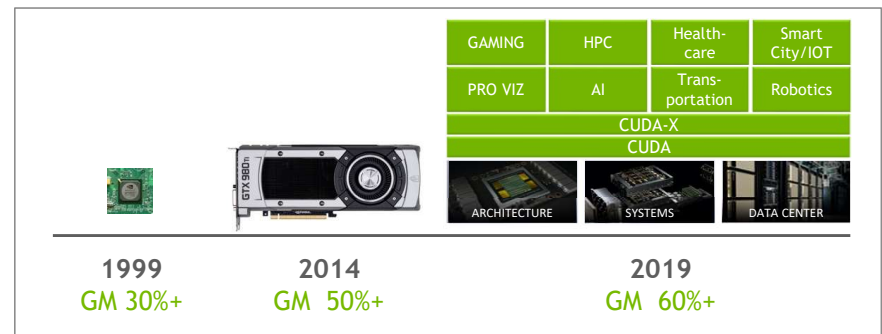

Recognitions

Harvard Business Review's **The CEO 100**
 Fortune's **Best Places to Work**
 MIT Tech Review's **50 Smartest Companies**
 Fortune's **World's Most Admired Companies**
 Forbes **JUST 100 Best Corporate Citizens**
 Dow Jones **Sustainability Index**

Revenue by Market Platform

From Chip Vendor to Computing Platform

DATACENTER SCALING TRENDS

Relentless Advancement – Switch Silicon Bandwidth

Represents a combination of multiple chip families and architectures to provide historical context and future projections

- ▶ Switch scale-up and scale-out
- ▶ 100G SerDes enables 800G transceivers
- ▶ 200G SerDes will enable 1.6 Tb/s

Source: Rakesh Chopra, Cisco Systems @ TEF 2021

WHAT IS COMING AFTER 400G?

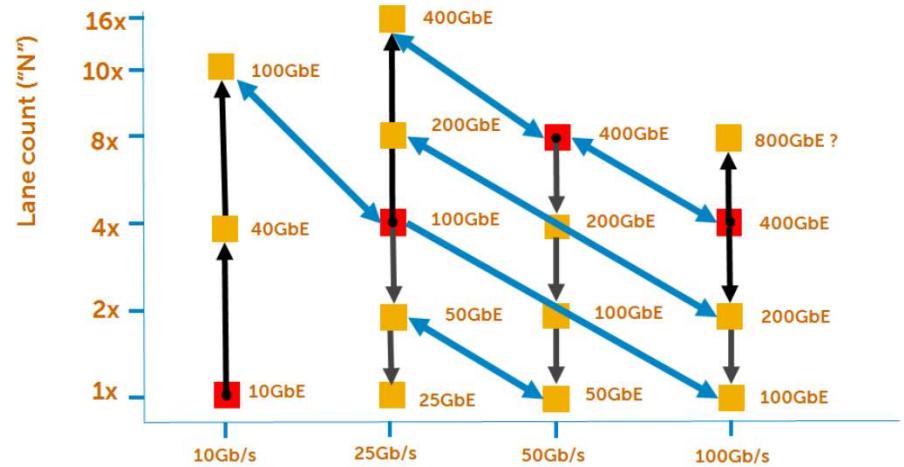

Interconnect speed evolution

● Ethernet Speed ○ Possible Future Speed

The New Rate Paradigm – “N” x “Z”

■ Indicates Ethernet rate at which signaling (optical or electrical) was introduced. Signaling rate per lane (“Z”)

Source: John D’ Ambrosia

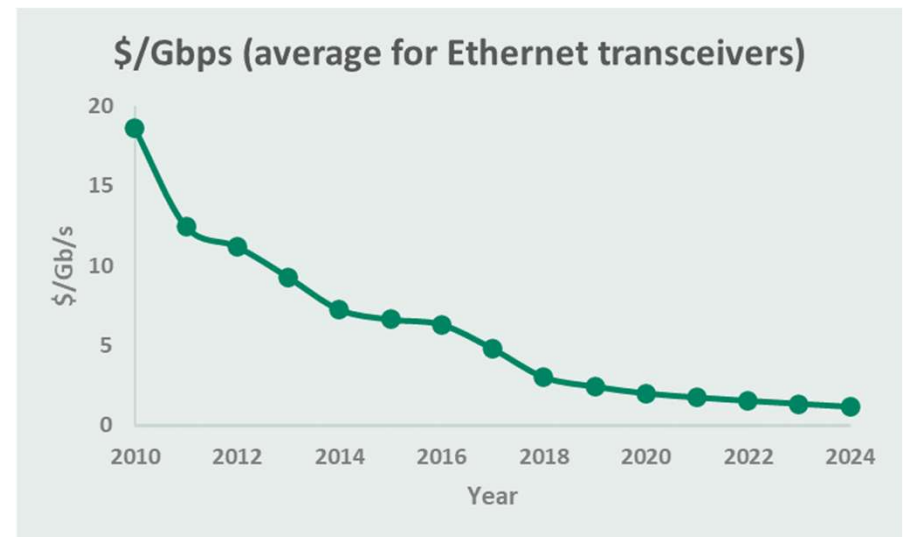

- ▶ Diverging speeds for diverging customer needs
- ▶ Next speed range from 800 Gb/s - 1.6 Tb/s
- ▶ Rate paradigm has worked well in last generations

SCALING CHALLENGES

Power, cost

Source: Microsoft

- ▶ Network power is taking up valuable system resources
- ▶ New solutions need to reach (at least) parity in cost/bit
- ▶ 400G flexibility still needed (diversity in medium interfaces, reaches)
- ▶ Can we continue to apply the scaling paradigm?

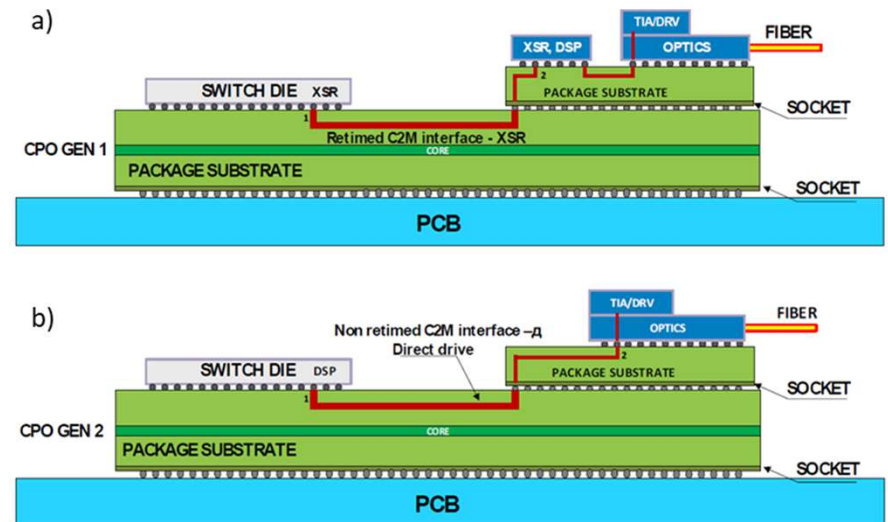

PHOTONIC INTEGRATION TO THE RESCUE

Large scale photonic integration can add transceiver value

- ▶ Increase bandwidth density
- ▶ Reduce cost/bit for many optical lanes
- ▶ Scale speed by miniaturization & close electronics integration
- ▶ ++ value beyond current conventional optics

What integration platform?

- ▶ no one-size-fits-all
- ▶ different requirements for diverging customer needs
- ▶ adopting fabless model

H2020 PROJECT POETICS

CoPackaging of Terabit direct-detection and coherent Optical Engines and switching circuits in mulTI-Chip moduleS for Datacenter networks and the 5G optical fronthaul

Elevated temperature EMLs

PolyBoard polymer waveguide platform

Interface to MCF

200 Gb/s PAM4

100 Gbaud analog mux/demux

1.6 Tb/s prototype platform

H2020 PROJECT MASSTART

MASS manufacturing of TrAnsceiveRs for Terabit/s era

CEA-Leti 50 Gbaud Silicon Photonics

Bright Design Kit

ALMAE laser arrays

TEEM WAFT

DUST silicon bench

FICONTEC & Tektronix automation

NVIDIA Networking integration

H2020 PROJECT IMPULSE: THE JEPPIX PILOT LINE

From prototype to pilot production

1. Create **manufacturing process design kits** by using smart testing to efficiently collect manufacturing statistics
2. **Increase capacity for open access** industrial prototyping and systematically improve performance of the building blocks
3. Validate the pilot line with two experienced participants to validate and stretch the platform **performance beyond state-of-the-art**
4. Demonstration through tens of external user designs
5. Establish a **sustainable business model** with a resilient industrial ecosystem to ensure continued open-access after four years
6. Support businesses as they scale to volume production
